If you want to read more about this, you can do this here Warning for basic hygiene sites The result of this means we are now having to go through our audit templates and update them all to make sure that any interpretation requirements are included as well. So, if you're auditing to the clauses of the Standard, you need to do this too. And, if you're writing procedures to meet the clauses, you now need to crosscheck the requirements against the interpretation to make sure you've not missed

anything. It seems to us that the interpretation from Issue 5 has just been copied and pasted across into Issue 6. If you find any more problems, it would be great if you could add them to the article, by putting them in the reply box at the bottom. So, here you go, here is our list of confusing elements about the Standard and the mistakes we've found mistakes are shown in red. It also needs to include that the management are committed to continual improvement, which isn't mentioned in the clause. And to make matters worse, culture isn't mentioned in any of these clauses. The interpretation explains that these protocols are published in the form of position statements, which can be found on the BRC website. It's true that they are sent to certification sites, however, BRC do not and will not, send them directly to sites. They expect your certification body to do this, so it depends on how good your CB is, as to whether you find out about it or not. This could be interpreted by an auditor that your site may need to have reviews more frequently than the minimum and therefore could possibly leave you open to a nonconformance being raised. So, you'll need to have a risk assessment which justifies your review frequency. This is surely a typo, as you can't just revise the objectives if you're not meeting them. Section 2 explains how CCP's are determined, but the Standard doesn't explain anywhere how QCP's are determined or what's expected in the implementation of a QCP.

<https://estacionsurmadrid.avanzagruppo.com/images/9.9-yamaha-4-stroke-manual.pdf>

A quality hazard for a packaging manufacturer may result in a safety hazard to the consumer. Splitting them doesn't seem to add any value and only confuses the situation. Therefore, we can only presume this is a typo. The example, goes on to say that the critical limit for this CCP could be, that each pallet needs two labels and should be scanned before being accepted into the site warehouse. This example is also used in 2.2.11 which infers that it is an example of a step they would expect to see as a CCP, even though the interpretation for 2.2 says that it is typical for packaging sites not to have any CCP's. This isn't implied at all in the clause. So, make sure they are included in the document control log and are identified, as this is not stated in the clause. It only mentions that the site is required to have a statement of compliance. This doesn't on its own provide evidence of anything. It could be possible that the auditor would want to speak with the person who created the statement, in order to evidence that it was created by someone with adequate knowledge of the legislation involved, and have them demonstrate how they are achieved. The interpretation talks about having a good quality management system that includes maintenance, it doesn't talk about the design of equipment or lubrication. The interpretation states that you must check the equipment regularly, which isn't implied in the clause. However, the interpretation talks about planned preventive maintenance systems, so there is a mismatch in the clause and interpretation. The interpretation talks about bait traps, which implies rodents and doesn't mention insects. The interpretation talks about additional requirements; siting them in the right places, making sure that waste doesn't get back into the production stream and also checking that this is the case. For example, 5.4.5 is line clearance, then we switch to process characteristics in clause 5.4.6 and then back to line clearance in 5.4.7.

<https://jdlgroup.ca/images/90-civic-manual-transmission.pdf>

However, then safety starts to come back in. After some consideration, we came to realise, that section 5.4 is not just about quality process control, but also about all the process controls you need. So, essentially, whatever you deem to be required through your hazard analysis in section 2 and also your hazard analysis from clause 5.4.1 needs to be implemented using the rest of section 5.4. It may seem obvious when you think about it, but it did confuse us for a while, so we're presuming we won't be the only ones. We really don't know what the benefit was of moving quality out of section 2 and putting it here. To us, it just adds confusion. This is confusing, as many quality defects may actually result in safety problems for the customer or consumer, so it's difficult to separate them. In the interpretation, the last sentence also talks about safety. We understand the statement, but think that adding it to the interpretation of the quality clause will cause confusion and it doesn't add any value.

In section 2, BRC have amended the flow chart clause to remove the term validation and replace it with verification. You can't validate a flow chart prove it will work you can only verify the flow chart check that it's right. Here we have a new clause and the term validation has been used in the wrong context again. They have said you need to validate the line clearance. They don't mean you need to prove that the line clearance will work, on further study, it turns out that they mean you need to establish if line clearance is necessary. However, the clause talks about calibration, which is something different and calibration is covered in 5.5.1. Even the example in this clause is really about calibration, not accuracy. Calibration and accuracy checks are related, but two different things and it would be good if BRC could write this section with this in mind, to help clarify the point. This should really sit in the calibration section, under accuracy checks.

It would be helpful to choose a term and stick to it. We have to validate that raw materials are correct before issuing them to production. What they actually mean, is that we should check that they are correct before issuing them to production, which is verification. A site who makes labels which do not come into contact with food, is a basic hygiene site, not high hygiene site, so this example is confusing. We thought the BRC Packaging Issue 6 interpretation was poor and littered with numerous issues that didn't add any value or understanding. We did endure it so that we would be able to support you which is the main reason that TechniK Smart Knowledge exists. Please ask us any questions and add to the post if you have persevered too! The responsible person on behalf of your management team provides answers for our consultant queries to ensure proper implementation of your management system. Onsite Implementation Support Price Request a Quote Our management system consultant will travel to your facility to guide you through a stepbystep implementation with checklist. The responsible person on behalf of your management team provides answers for our consultant queries to ensure proper implementation of your management system PreCertification Audit Services Price Request a Quote Our certified lead auditor will conduct a precertification internal audit, to determine readiness for a certification audit. A report of findings and corrective actions will be provided to ensure successful BRC certification. Performing an initial internal audit is required by certification bodies prior to the certification audit. We will complete the certification application and submit for your approval. Upon completion of the certification audit, we will assist in responding to any findings during the initial certification audit, until certification is achieved.

We will continue to be available via phone or email for 30 days upon achieving certification. Closure on NonConformities Price Request a Quote When certification body issues nonconformity during an audit there is strict guidance you must follow to close out the nonconformity. Our experienced consultants will identify your nonconformance in a quality audit or other process review. We will provide guidance on closing out nonconformance for your certification. Several functions may not work. Please reenable javascript to access full functionality. I will also upload to the files section. Please be aware that the descriptions of the requirements in the clauses are not all inclusive. You will still need to have the Standard to ensure all items are covered. To retype all of the content of the clauses would be too much work, would result in an unwieldy tool and more than likely be an infringement on copywrite. Marshall I will also upload to the files section. Marshall Hi Marshall this is a bonus, we just had our last BRC audit against issue 5. I am the quality auditor in the company I work for and my next project is to risk assess and determine the auditing frequency against issue 6 and prepere the check list, but seems to me that you provided me 50% of the job I needed to do so cheers for that. TaTa Quite welcomeI enjoy cycling, walking and travelling, watching sport, especially football and Manchester United. Oh and I love food and beer and wine. Regards, Simon Download this handy excel for desktop access to over 140 Food Safety Fridays webinar recordings. Check out IFSQN's extensive library of FREE food safety videos I had a quick look at opening sections. I hv not seen ver6 so my comments below based on comparison to ver5.I had a quick look at opening sections. I hv not seen ver6 so my comments below based on comparison to ver5. Not all requirements in the specific clause are indicated on the checklist.

You will still need to have the Standard handy to ensure full compliance. v5 2.1.2 and 2.1.3 are included in v6 2.1.1 and v5 2.2.3 is included in v6 2.3.1 for example. MarshallNot all requirements in the specific clause are indicated on the checklist. You will still need to have the Standard handy to ensure full compliance. Thks for the comments. IMEX, and in agreement with yr last sentence above, this is always the risk in checklists. They can be wonderfully helpful but they can also occasionally be overoptimistic if the user doesnt read the full standard alongside. Im sure Caddyshack will echo such an opinion.IMEX, and in agreement with yr last sentence above, this is always the risk in checklists. They can be wonderfully helpful but they can also occasionally be overoptimistic if the user doesnt read the full standard alongside. The whole purpose of my checklist is to show, at a glance, what is or what is not conforming. If one uses the checklist, and the Standard when doing

internal auditing or when getting ready for initial certification, one can easily see where more work is required. Marshall Or rather the auditor. Not wishing to criticise yr effort at all, quite the contrary, just adding a hopefully general caveat to users of checklists. I did say that people were free to use or modify it to suit their purposes. Excellent work. Well done Greg Well done Greg Quite welcome Food safety for all things eaten not just what we make. Being able to see my kids grow up in healthy environment. We are just getting ready for our first BRC audit and I am just trying to get my hands around the fact that we must complete internal audits and what we must put into that audit. I am thinking of preparing the internal audits by section. So that would give me seven. Would that be a safe way to procede. Regards Jim If you dont produce anything, and simply resell product, I dont see why you should have to be certified. I would however, insist that your subcontractor is.

Marshall I have my first BRC audit in July, this Tuesday I will be going through my preaudit first. Niru Cheers, Big Kid This includes cookies to track your use of our website. If you continue without changing your browser settings, we'll assume that you are happy to receive all cookies on our website. Privacy Policy. By continuing to access the site you are agreeing to their use. By using a hazard and riskbased approach that addresses site cleanliness standards, printed packaging controls, product inspection and the control of foreign bodies, certified organizations and their customers can be confident in the resulting in the quality management system. The BRCGD Packaging Standard is the first packaging Standard in the world to be recognized by the Global Food Safety Initiative GFSI. Enquire and book BRCGS Packaging certification audit. The first BRCGS Packaging audits and certification to issue 6 of BRCGS Packaging audits and certification to issue 6 of the BRCGS Global Standard for Packaging Material commenced in February 2020. To get a BRCGS training certificate of achievement, simply book your training with BSI and take your exam during your course. This includes BRCGS Packaging Materials Issue 56 training courses. Or perhaps you want us to come to you and train your team onsite, cutting down on staff travel and accommodation costs. Send us a message and we'll get back to you to make BRCGS training work for you and your team. With BSOL, it's easy to build your own database of relevant standards. As per the standard, the Food Safety Management System should be documented and be demonstrable in the manner consistent with the requirements of BRC Global Standard models. The total demonstration in the Food safety management System consists of following.
